1. Introduction

This document describes how to configure your DualComm DCSW-1005 for port mirroring. The DCSW-1005 is a network TAP, which requires no configuration.

2. Connectivity

The unit is hard wired to mirror all traffic to/from Port 1 onto Port 5.

Connect your internet router to Port 1.

Connect your computer which is running the CallIN software to Port 5.

Please Note: Port 5 is able to be used for call recording as well as internet connectivity as the port is not dedicated just for receiving the mirrored traffic.
